

Week 5 Homework Submission File: Archiving and Logging Data

Please edit this file by adding the solution commands on the line below the prompt.

Save and submit the completed file for your homework submission.

Step 1: Create, Extract, Compress, and Manage tar Backup Archives

1. Command to **extract** the TarDocs.tar archive to the current directory:
`tar -xvzf TarDocs.tar`
2. Command to **create** the Javaless_Doc.tar archive from the TarDocs/ directory, while excluding the TarDocs/Documents/Java directory:
`tar -cvzf Javaless_Docs.tar --exclude="TarDocs/Documents/Java" TarDocs/`
3. Command to ensure Java/ is not in the new Javaless_Docs.tar archive:
`tar -tvf Javaless_Docs.tar | grep Java`

Bonus

- Command to create an incremental archive called logs_backup.tar.gz with only changed files to snapshot.file for the /var/log directory:
`sudo tar --listed-incremental=snapshot.file -czf logs_backup.tar.gz /var/log`

Critical Analysis Question

- Why wouldn't you use the options -x and -c at the same time with tar?
You wouldn't use the options -x and -c at the same time with tar because -x is for extracting a file and -c is for creating a file, so it wouldn't work to use them together.
-

Step 2: Create, Manage, and Automate Cron Jobs

1. Cron job for backing up the /var/log/auth.log file:
`0 6 * * */4 tar -czf /auth_backup.tgz /var/log/auth.log`

Step 3: Write Basic Bash Scripts

1. Brace expansion command to create the four subdirectories:

```
sudo mkdir -p ~/backups/{freemem,diskuse,openlist,freedisk}
```

Paste your system.sh script edits below:

```
#!/bin/bash
```

2. [Your solution script contents here]

```
free -h > ~/backups/freemem/free_mem.txt  
du -h > ~/backups/diskuse/disk_usage.txt  
ls -l > ~/backups/openlist/open_list.txt  
df -h > ~/backups/freedisk/free_disk.txt
```

3. Command to make the system.sh script executable:

```
sudo chmod +x system.sh
```

Optional

- Commands to test the script and confirm its execution:

```
cat ~/backups/freemem/free_mem.txt  
cat ~/backups/diskuse/disk_usage.txt  
cat ~/backups/openlist/open_list.txt  
cat ~/backups/freedisk/free_disk.txt
```

Bonus

- Command to copy system to system-wide cron directory:

```
sudo cp system.sh /etc/cron.weekly
```

Step 4. Manage Log File Sizes

1. Run `sudo nano /etc/logrotate.conf` to edit the logrotate configuration file.

Configure a log rotation scheme that backs up authentication messages to the `/var/log/auth.log`.

- Add your config file edits below:
[Your logrotate scheme edits here]

```
/var/log/auth.log {  
    weekly  
    rotate 7  
    notifempty  
    delaycompress  
    compress  
    missingok  
    endscrip  
}
```

Bonus: Check for Policy and File Violations

1. Command to verify auditd is active:

```
systemctl status auditd
```

2. Command to set number of retained logs and maximum log file size:

```
sudo nano /etc/audit/auditd.conf
```

- Add the edits made to the configuration file below:

```
num_logs=7
```

```
num_log_file=35
```

3. Command using auditd to set rules for /etc/shadow, /etc/passwd and /var/log/auth.log:

```
sudo nano /etc/audit/rules.d/audit.rules
```

- Add the edits made to the rules file below:

```
-w etc/shadow -p wra -k hashpass_audit
```

```
-w etc/passwd -p wra -k userpass_audit
```

```
-w var/log/auth.log -p wra -k authlog_audit
```

4. Command to restart auditd:

```
sudo systemctl restart auditd
```

5. Command to list all auditd rules:

```
sudo auditctl -l
```

6. Command to produce an audit report:
`sudo aureport -au`
 7. Create a user with sudo useradd attacker and produce an audit report that lists account modifications:
`sudo useradd attacker`
`sudo aureport -m`
 8. Command to use auditd to watch /var/log/cron:
`sudo auditctl -w /var/log/cron`
 9. Command to verify auditd rules:
`sudo auditctl -l`
-

Bonus (Research Activity): Perform Various Log Filtering Techniques

1. Command to return journalctl messages with priorities from emergency to error:
`sudo journalctl -p 0..3`
2. Command to check the disk usage of the system journal unit since the most recent boot:
`sudo journalctl -b -u systemd-journald`
3. Command to remove all archived journal files except the most recent two:
`sudo journalctl --vacuum-file=2`
4. Command to filter all log messages with priority levels between zero and two, and save output to /home/sysadmin/Priority_High.txt:
`sudo journalctl -p 0..2 > /home/sysadmin/Priority_High.txt`
5. Command to automate the last command in a daily cronjob. Add the edits made to the crontab file below:
`sudo crontab -e`

[Your solution cron edits here]

```
0 20 * * */1 sudo journalctl -p 0..2 > /home/sysadmin/Priority_High.txt
```
